

1. Switch off the buchla system and disconnect module from the power bus
2. Connect it to the computer with the mini-usb cable
3. Start the Teensy app and activate an “Auto” mode
4. Load the firmware .hex file into Teensy app
5. Locate small button on the back of the module and press it

In a couple of seconds new firmware will be uploaded and module will reboot automatically.

You may connect it back now and switch on.
